

Visceral Fascial Manipulation: Large and Small Intestine

Sunday, September 17, 9:30-5:30

Instructor: Stacey Hauserman, RMT, DOMP

Max Participant #: 16

Visceral Fascial Manipulation: Large and Small Intestine provides an opportunity to enhance your palpation skills while learning new techniques to help your clients with gastrointestinal symptoms. We will explore the anatomy, physiology, neurology and interrelationships of the abdominal contents with the primary focus being on the small and large intestines (other viscera will be emphasized in future courses). There will be ample hands-on time to learn techniques to identify, prepare and treat the intestinal fascia. This course will also provide assessment tools to know when and how to integrate visceral fascial manipulation into your massage therapy treatments.

Instructor:

Stacey Hauserman graduated from Sutherland-Chan in 1997. Her initial hospital-based practice involved treating clients with a variety of neurological disorders. The limited mobility and progressive nature of these disorders lead her into a house-call practice. After 10 years, Stacey chose to pursue osteopathic manual therapy, graduating in 2009 from the 5-year program at the Canadian College of Osteopathy. She completed her thesis on “The Effects of Cranial Osteopathy on Balance in Parkinson’s Patients” and was awarded the Willian Garner Sutherland award for outstanding research. Stacey currently practices in a family-based clinic in Toronto and enjoys teaching movement, yoga and continuing education workshops.
